SWITZERLAND

R&D Project Manager

Dear Sir or Madam

The mouth is the mirror of our health.

During my research Master's in biomedical engineering, I had the opportunity to do an internship with dentists. Their subject of research was the impact of a muscle segment homeobox gene on dental development. This experience introduced me to what turned out to be a fascinating subject, namely the engineering for specific health issues. I continued my experience in the medical field by working for Air Liquide Medical System on respiratory devices. The field of health is the one that excites me the most and that is why I chose to further my studies with a biomedical specialty. Passionate and with an analytical mindset, I love finding solutions to help other people stay healthy and improve their daily lives.

During my career, I had some great experiences as a technical project leader. Following the product from the customer's requirements, or marketing in the case of Air Liquide, to its delivery and working closely with all the internal and external stakeholders.

Really adaptable, methodical and proactive, you will be able to count on me to support the R&D and Project Managers as well as the Sales Team to lead the project to success while also to keep the documentation up to date.

I would be thrilled to learn more about this job opening. Thank you for your time, I look forward to hearing from you.

Best Regards,

Laura Gomez
