R&D Project Manager

Dear Sir or Madam

The mouth is the mirror of our health.

During my research Master's in biomedical engineering, I had the chance to do a short internship with dentists. Their subject of research was the impact of a Muscle segment homeobox gene on the dental development. At that time, my additional value was small but I discovered a fascinating subject. The field of health is the one that animates me the most and that is why I chose to continue my school career with a biomedical specialty. Passionate and with an analytical, I love finding solutions to help other people stay healthy or improve their daily lives.

During my career, I had some great experiences as a technical project leader. Following the product from the customer need to the delivery and working closely with all the internal and external stakeholders.

Really adaptive, methodical and proactive, you will be able to count on me to support the R&D and Project Manager as well as the Sales Team to lead the project to success but also to keep the documentation up to date.

I'd be thrilled to learn more about this job opening. Thank you for your time, I look forward to hearing from you.

Best Regards,

Laura Gomez
